TSA TWIC ICE Approved Veridt Readers

The Initial Capability Evaluation (ICE) List includes information on all readers that demonstrated to the Transportation Security Administration and the U.S. Coast Guard successful completion of the evaluation. Broad Agency Announcements (BAA) available elsewhere on this web site contain details of the ICE and other information about the Transportation Worker Identification Credential (TWIC) reader testing program.

This list serves no other purpose other than to identify readers that have demonstrated their ability to complete the ICE satisfactorily.

Two ICE lists are maintained:

The first list details portable and fixed readers which directly support the TWIC Privacy Key (TPK) enciphered on-card reference biometrics during registration and in operation.

The second list details portable and fixed readers which implement an alternate operational biometric solution. The TPK enciphered on-card reference biometrics is used only during registration into a Physical Access Control System (PACS) prior to having the cardholder biometrically enroll. (Such a verification and validation process of the card and cardholder prior to local enrollment into an operational biometric solution is required to preserve the Chain of Trust).

Approved Veridt Credential Reader Hardware Platforms:

900W0034	KeyPad + Biometric + Contact Card Read Interface
900W1020:	Contactless Card Read + KeyPad + Biometric
900W1030:	Contactless Card Read + KeyPad + Biometric + Contact Card Read Interface
900W0099:	Contactless Card Read + KeyPad + Biometric + Mag-Stripe Card Read Interface
